

ई KSHANA

Your Health at Your Fingertips

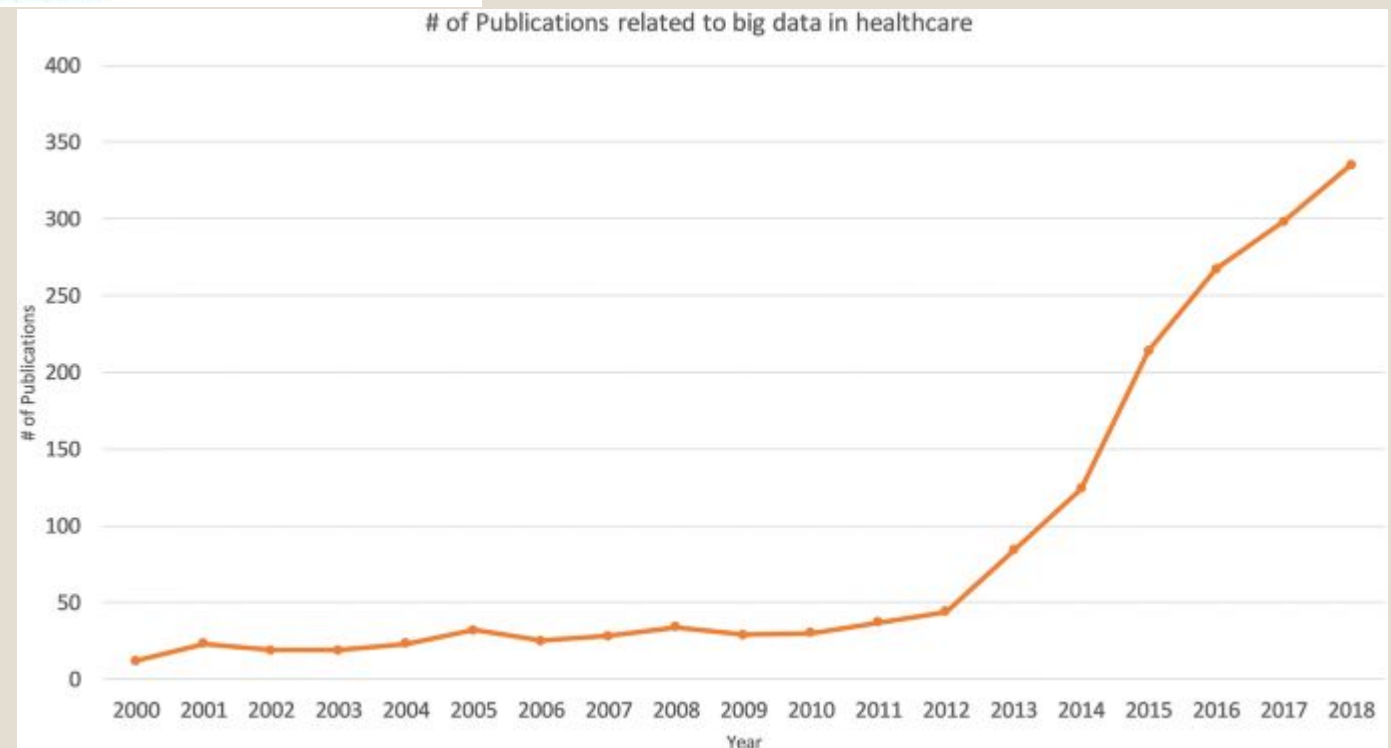

Most Important thing for advancement in healthcare:

- “Database Management of Medical Reports”
- With a strong integration of biomedical and healthcare data, modern healthcare organizations can possibly revolutionize medical therapies and personalized medicine

Workflow of Big data Analytics. Data warehouses store massive amounts of data generated from various sources. This data is processed using analytic pipelines to obtain smarter and affordable healthcare options

Publications associated with big data in healthcare. The numbers of publications in PubMed are plotted by year

Problems:

- Holistic medical report and history of an individual across all clinics, hospitals, healthcare providers, wearables, and pathological lab tests.
- Database management for hospitals and healthcare providers requires large computing power and is a cumbersome task
- Early detection and diagnosis of illness, terminal diseases
- Rare disease diagnosis and treatment

THE NEXT BIG HEALTHCARE/ HEALTH TECH
REVOLUTION IS NOT A PILL THAT CURES CANCER
RATHER WILL ORIGINATE FROM DATABASE
ORGANIZATION AND MANAGEMENT

Potential Market and Market Validation:

- "Every google user practically is our target market which is 500MN users in India."

Apollo

**65,300 Healthcare
apps
On Google Play Store**

**Estimated Global
Mobile Health Market
till 2025
\$189 BN**

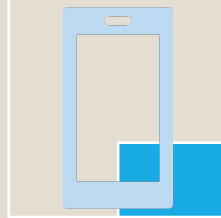

**In India
Pvt hospitals:
43,486
Govt hospitals:
10,453**

3 services provided{SaaS}

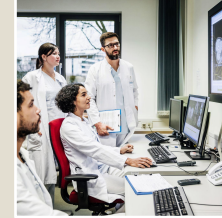

1.

- Database management system for hospitals

2.

- Mobile health app for user
- All in one Medical record of an individual

3.

- Community hub of doctors and researchers

Service-1- SaaS For Hospitals and Clinics

- Database Management system to track patients records, hospital staff and other resources
- Providing cloud based versions of its data platform
- Already compiled Medical history of patients available at one touch

The added-on payment service would be -

“For rare disease treatment, our database would work as a search engine for diagnosis and for treatment, medicine efficiency and combinations could be tested on our simulation that takes in person's medical history and gives out possible side effects and downturns of a particular treatment

Service 2- User-based SaaS

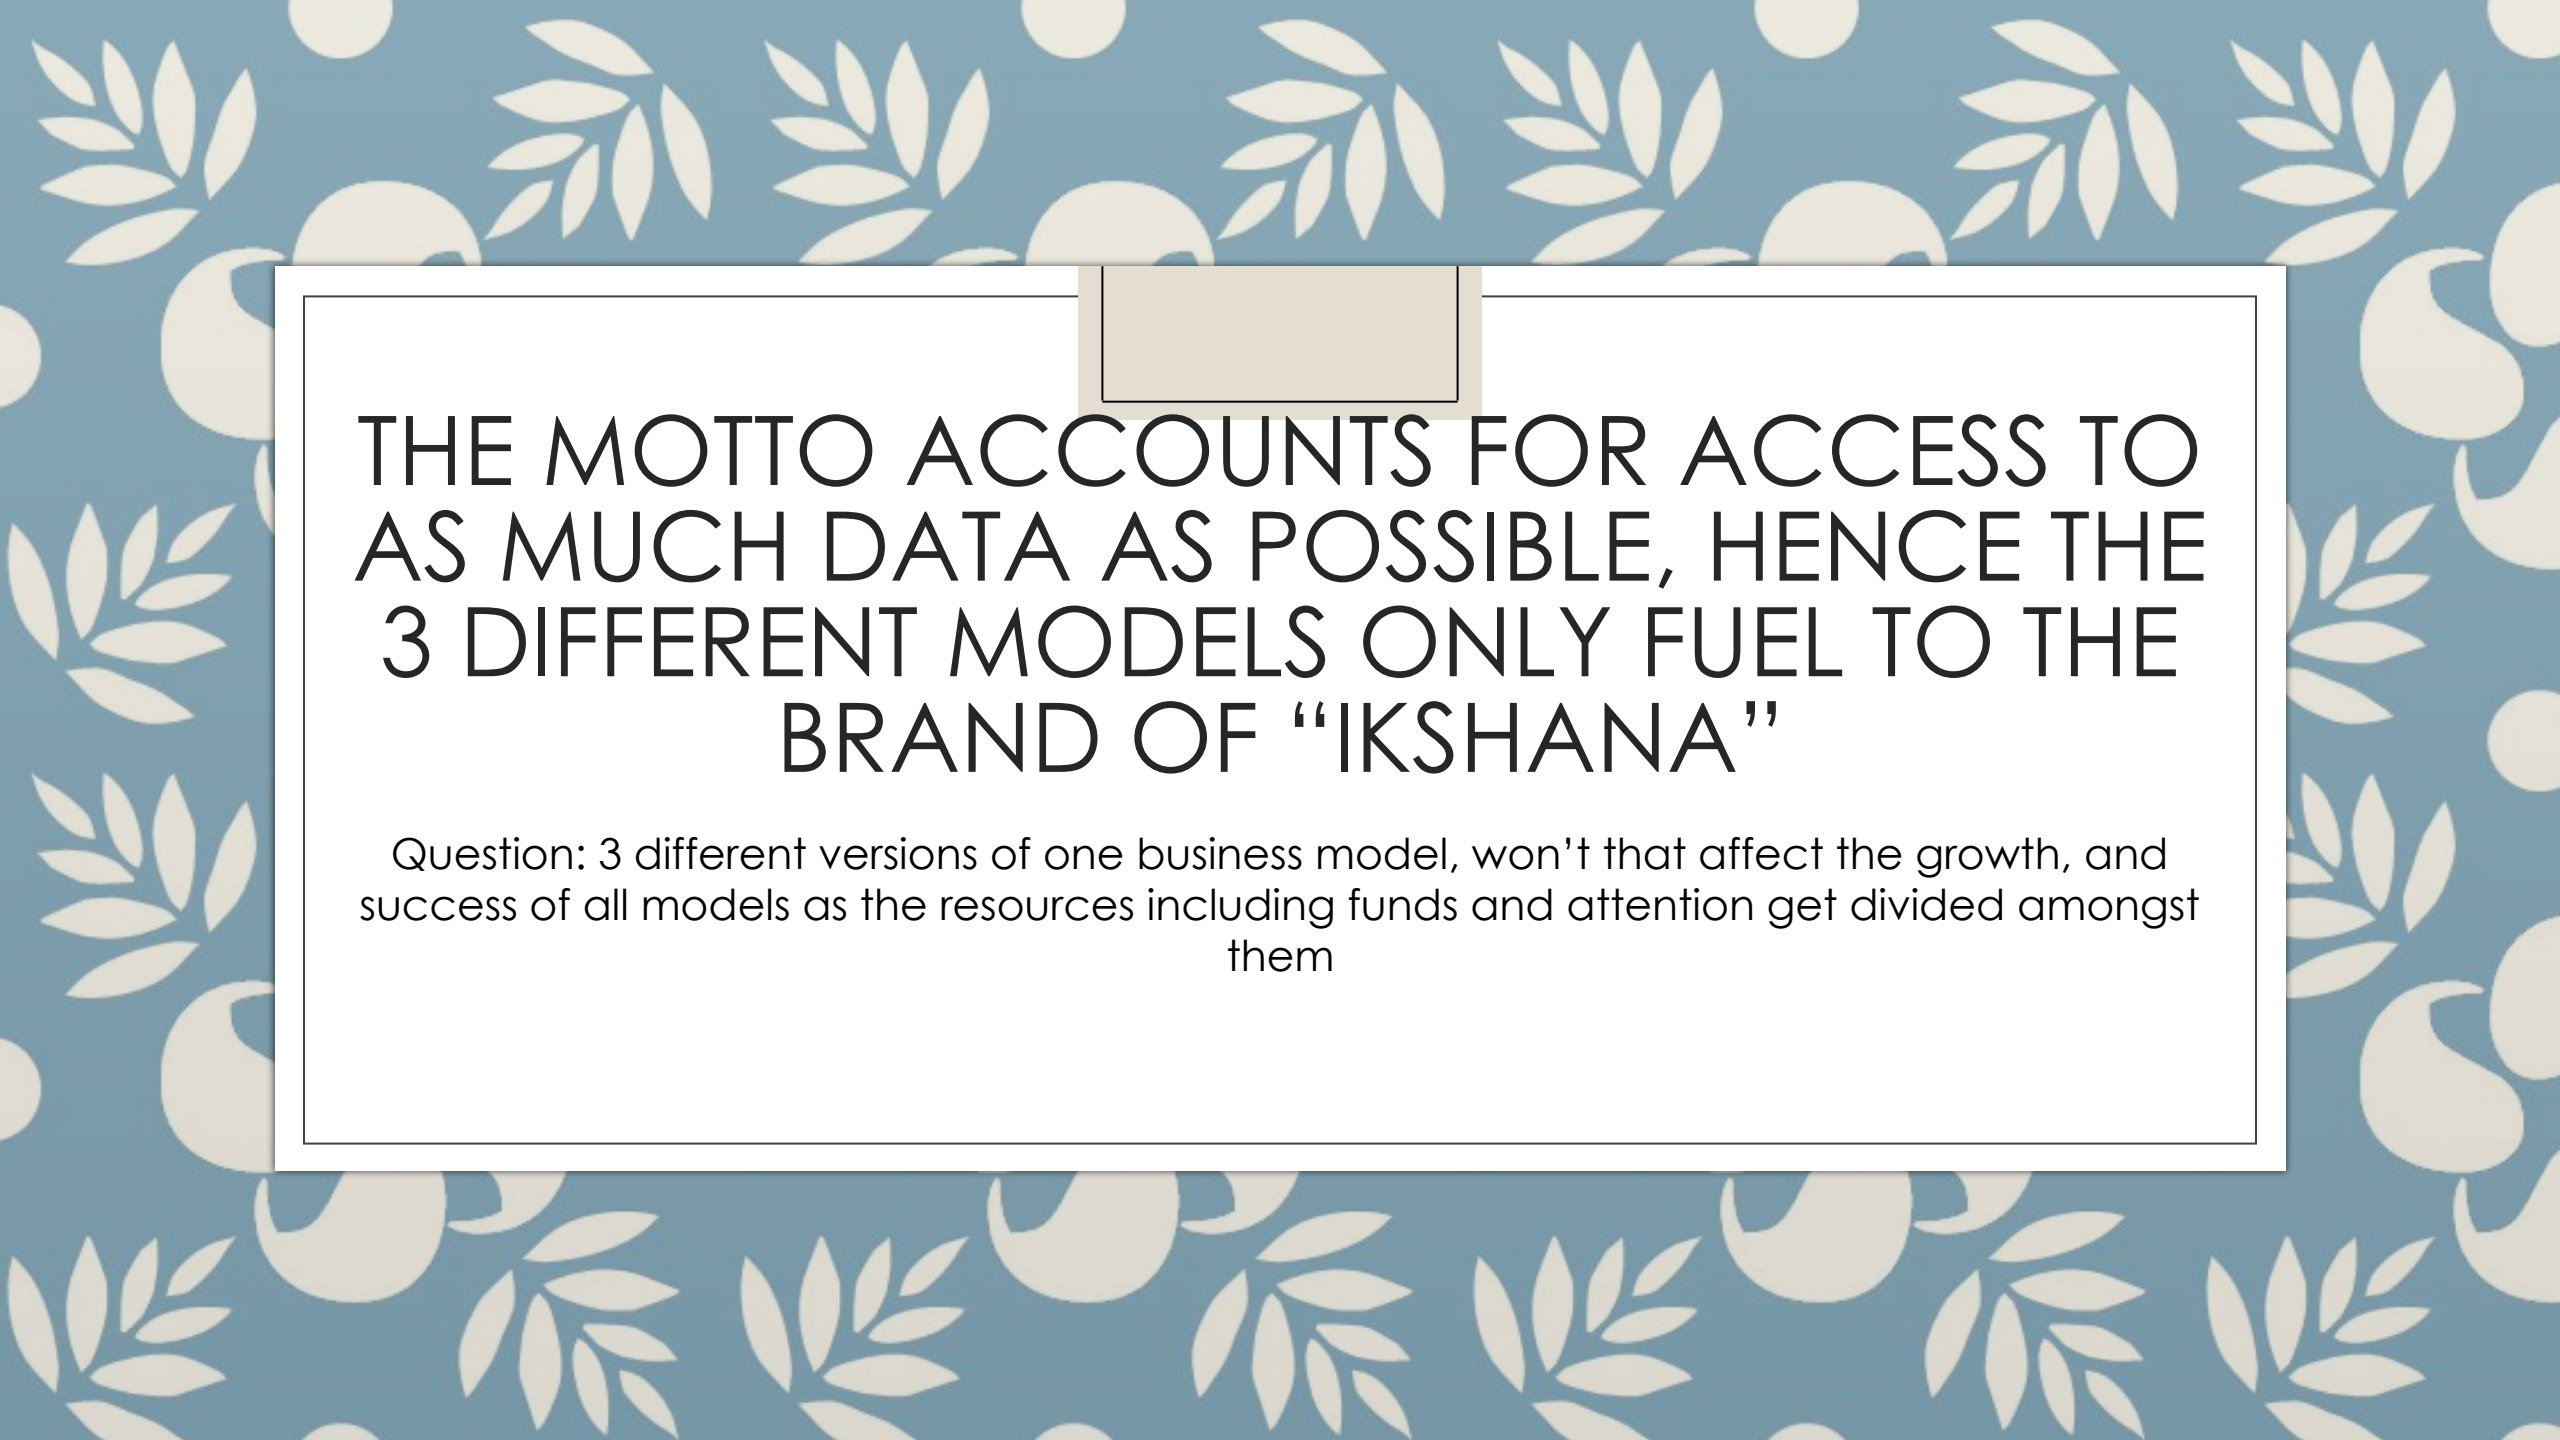

- Can schedule and track medicines, lab tests, diet and exercise – free
- Home based diagnosis on symptoms recorded of users
- Feed in pathological reports and get literal and Comprehensive translation of Medical jargon- First 15 free, post which switch to subscription-based app

The Subscription would provide the following add on services:

- Entire individual and family medical reports and history at one touch including past path lab tests, insurances enrolled in, past clinic and hospital visits, wearable health track recorded over past and on daily basis
- Recommendations and suggestions of doctors and other healthcare providers
- Creates a unique QR code for your medical profile (like paytm account has one)

Service 3 – For doctors SaaS

- Creates a community for doctors, researches and medical reputed personalities for discussion medical marvels and exceptions.
- To publish papers and record new advancements happening daily across the globe
- Basically a “Newsletter” for “Medical World”
- The content is free for all.
- The subscription based model would provide you latest content and news in relevance order.
- The newly posted papers would be available for all 2 days later in non subscription model

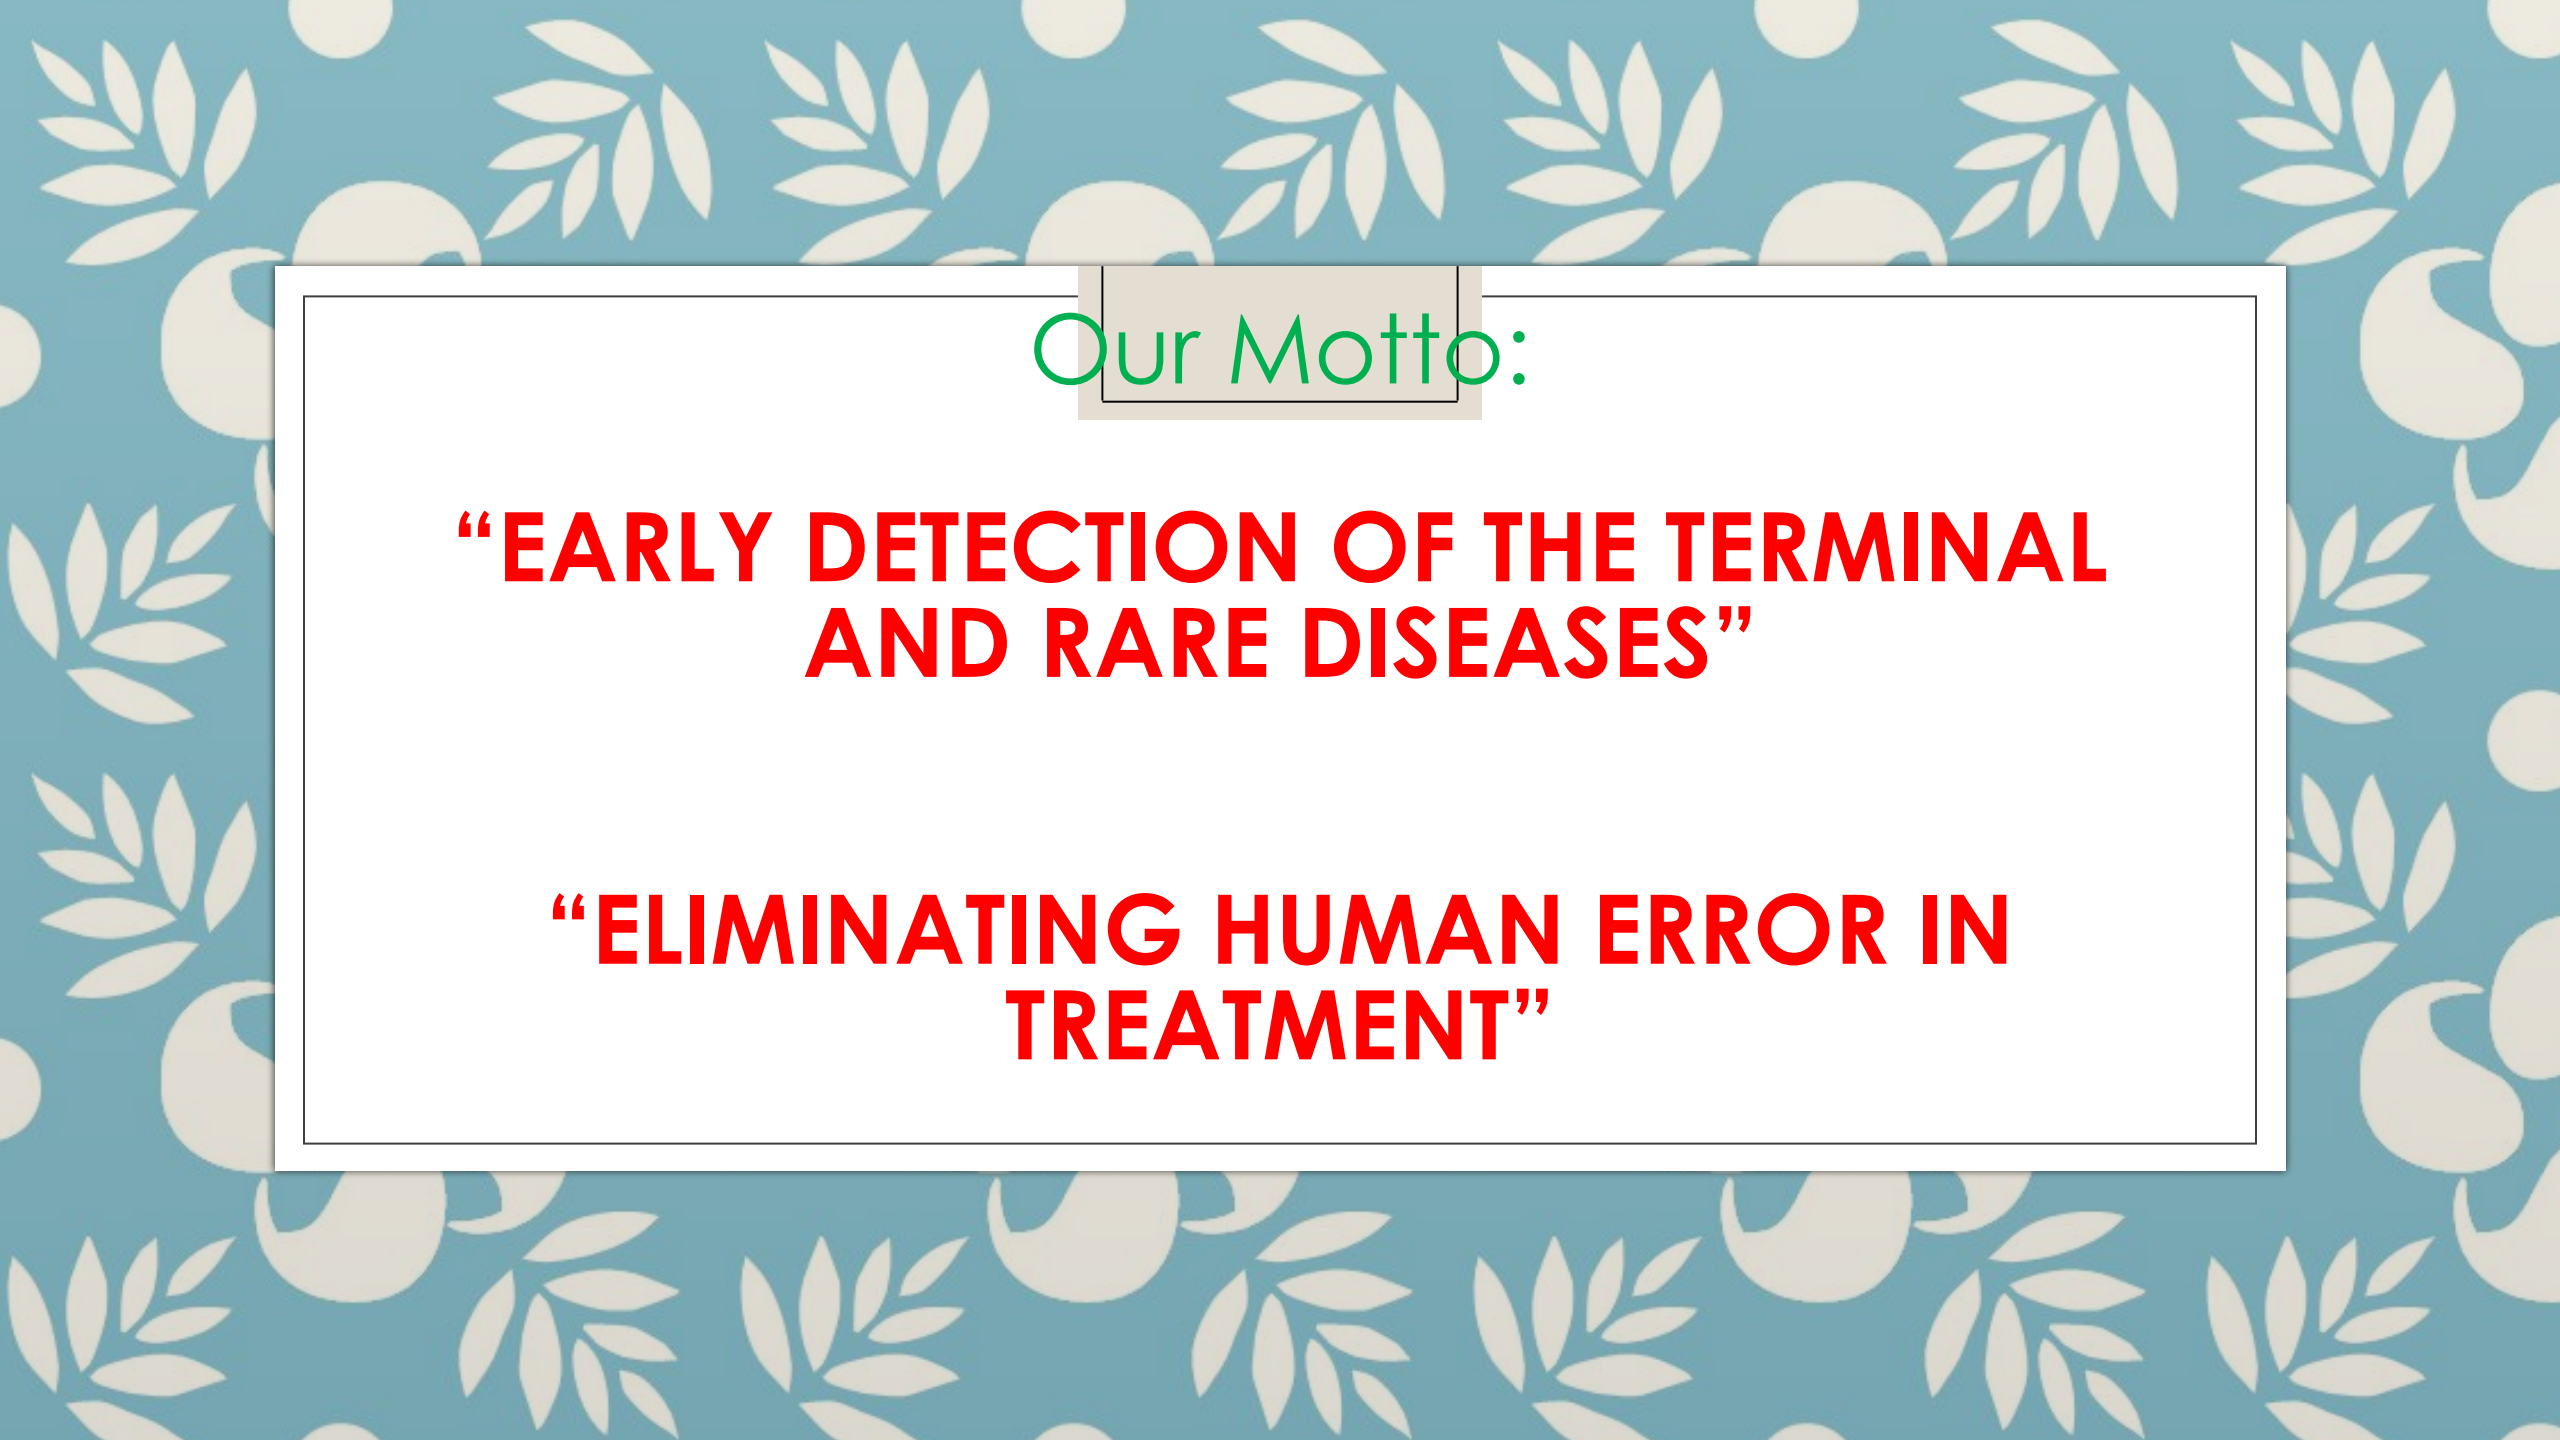

THE MOTTO ACCOUNTS FOR ACCESS TO AS MUCH DATA AS POSSIBLE, HENCE THE 3 DIFFERENT MODELS ONLY FUEL TO THE BRAND OF “IKSHANA”

Question: 3 different versions of one business model, won't that affect the growth, and success of all models as the resources including funds and attention get divided amongst them

Marketing and Publicity

- Reaching out to hospitals is the first and foremost task
 - Through hospitals, we will get to patients, insurance providers, path labs and clinics
- We have already reached and registered our name in our target market (doctors and individual)
- The platform's Mhealthcare app could be publicized through influencer marketing...reaching out to doctors and nurses that create digital medical content
 - Each research paper would be listed into our library attracting doctors and researchers
 - The only competition that comes close to our motto, services provided and USP is "INNOVACER" which although an Indian Unicorn is based in silicon valley. And we have a novie competitive advantage in Indian Market

Our Motto:

**“EARLY DETECTION OF THE TERMINAL
AND RARE DISEASES”**

**“ELIMINATING HUMAN ERROR IN
TREATMENT”**

USP

**OUR HEALTHCARE AND
HEALTH TECH BUSINESS
MODEL INTEGRATES
EVERYTHING THAT COULD BE
ASKED OF A “MEDICAL
EXPERIENCE”**
