

Quick Commerce

Quick Commerce GMV
USD Bn, 2019-2023

GMV YoY Growth
%, 2022-2023

Note: Gross GMV at selling price, excluding delivery fee, 1 USD = INR 80

- 75% of Q-commerce orders come from Tier-1 cities (Mumbai, Delhi, Bengaluru, Hyderabad).
- Order volumes highest during early morning, late evening, and weekend slots, when traditional shops are closed.

FUTURE GROWTH OPPURTUNITIES

Niche Specialization

Introducing premium or health-conscious café offerings to capture niche consumer segments.

Subscription and Loyalty Programs

Incentivizing regular usage through subscriptions for daily coffee or snacks, enhancing customer retention.

Data-Driven Expansion

Utilizing granular customer data to inform strategic geographic and product expansion, ensuring operational efficiency and market responsiveness.

RECOMMENDATIONS

- A/B Test Basket Bundling: Incentivize ₹300+ baskets with snack or beverage add-ons.
- Use Micro-Zone Data: Launch hyperlocal campaigns around top-selling items in a 1-km radius.
- Introduce Subscription Models: Offer weekly delivery credits or priority slots for top-tier customers.
- Leverage Heat Maps for SKU Optimization: Stock only fast-moving SKUs per dark store based on local cluster behavior.

DEMAND DRIVERS: UNDERSTANDING THE MARKET GAP

Shift in Consumer Expectation

- According to Bain (2024), 80% of online users in metros now expect delivery in under 30 minutes.
- Swiggy Instamart data: peak grocery orders happen within 8-10 minutes of cart addition.

Impulse + Routine Needs

- Milk, snacks, medicines, beverages, baby care, and forgotten essentials drive urgency.
- Traditional e-commerce (1-2 day delivery) too slow; hyperlocal stores lack scale and tech.

Millennial & Gen Z Behavior

- 65% of Q-commerce users are aged 18-35.
- Preference for digital-first convenience over price arbitrage.

ADVANTAGES OF QUICK COMMERCE

Consumer-Centric

- Zero planning window needed, satisfies real-time demand.
- Increased satisfaction and frequency of purchases (habit loop formation).

High Retention + High Frequency

- Q-commerce customers order 3x more per month than traditional e-commerce.
- High Net Promoter Score (NPS) due to speed + reliability.

Low Cart Value, High Velocity Model

- Unlike traditional e-commerce, where baskets are larger, Q-commerce thrives on 5-10 minute fulfillment of small-ticket items creating high order density per km².

Dark Store Advantage

- 400-800 sq. ft. fulfillment centers optimize SKUs for speed and density.
- Enables rapid scaling in metro zones without front-end retail costs.

DISADVANTAGES AND CHALLENGES

Challenge	Description	Mitigation Strategy
High Burn Rate	Delivery costs remain high per order	Improve AOV through bundling, private labels
Rider Safety	Cannot match breadth of e-commerce	Smart curation based on local data
Regulatory	FSSAI, dark store licensing	Legal compliance SOPs and risk management teams

CONCLUSION

Quick commerce is not just a fleeting trend, it's an infrastructural innovation aligned with consumer psychology and urban evolution. While capital-intensive, it creates unparalleled user stickiness, builds a strong base for private-label integration, and presents a defensible moat via micro-fulfillment logistics. For product teams, Q-commerce offers endless opportunities to drive frequency, relevance, and efficiency at scale.

FUTURE OF Q-COMM

- Expected market value of India's Q-commerce sector by 2025: \$5 Bn
- CAGR of the Indian grocery market: 57%
- Predicted market size for online grocery by 2024: \$18 Bn
- Market value of Indian quick commerce in 2021: \$300 Mn
- Growth rate expected in this sector in the next 5 years: 10-15X

Zepto Café

INDIA'S FOOD DELIVERY LANDSCAPE

India's online food delivery market has traditionally been dominated by Swiggy and Zomato, collectively controlling nearly 90% of the market. As per Statista (2023), India's online food delivery sector is projected to grow from USD 7.2 billion in 2022 to USD 21.41 billion by 2027, reflecting a CAGR of approximately 24%. Despite this growth, issues around dependency on restaurant partners, regulatory scrutiny, and margin pressures persist.

WHY ZEPTO CAFÉ FOR THE COMPANY

A. STRATEGIC PIVOT

- Private Label Approach**
 - No dependency on restaurant partners → Full control on quality, pricing.
 - Sidesteps regulatory issues plaguing aggregator platforms.
- Hyperlocal Synergy**
 - Utilizes Zepto's 10-min grocery delivery infra → No new CAPEX.
 - Marginal cost of delivering additional Café items is minimal.
- Consumer Convenience**
 - Serves impulse needs → snacks, coffee, hot food in under 10 mins.

B. BUSINESS OUTCOME LEVERS

- Increased AOV:** Café items boost basket size (₹30–₹150 add-ons).
- High Margin Products:** 35–50% GM vs. groceries' 7–12%.
- Improved Unit Economics:** Distributes fixed delivery costs across more profitable items.

WHY SHOULD CONSUMERS CHOOSE ZEPTO CAFÉ?

- Speed + Hot Food:** Only platform promising café-style meals and beverages in 10 minutes.
- Affordability:** ₹99 cold brew vs. ₹300 Starbucks on Swiggy.
- Consistency:** Same taste and packaging every time.
- Impulse Purchase Match:** Built for snack breaks, caffeine hits, late-night cravings.

RISK AND MITIGATION STRATEGY

Challenge	Description	Mitigation
Regulatory	FSSAI, private labeling scrutiny	Proactive compliance audits
Health/Safety	Food quality risks	Central kitchen SOPs, QC teams
Worker Safety	Rider speed pressure	Route optimization, incentive-based delivery slots
Operational	Menu prep time	3-minute prep constraint enforced

FUTURE GROWTH OPPURTUNITIES

- Niche Café Offerings:** Keto, protein-rich, vegan snacks.
- Cross-Sell Experiments:** Push Café items during high-grocery-volume hours.
- Brand Partnerships:** Feature artisanal/local D2C brands/chefs/tiffin services.

COMPETITOR SNAPSHOT

Platform	Type	Limitation
Swiggy Bolt	Partnered	30–40 min avg time, restaurant dependent
Blinkit Bistro	In-office target	Not widespread
Zomato Quick	Pre-assembled	Limited menu scope

WHY SHOULD INVESTORS BACK ZEPTO CAFÉ?

A. EARLY TRACTION & GROWTH

- Dec 2024: 30k daily orders.
- Jan 2025: 50k orders/day (+60% MoM).
- Feb 2025: 75k orders/day (+50% MoM).

B. CAPITAL EFFICIENCY

- No new delivery ops required.
- Shared infrastructure = low marginal cost.

C. STRONG UNIT ECONOMICS

- CAC amortized across grocery + Café verticals.
- Café increases customer LTV and app stickiness.

D. SCALABLE MOAT

- First-mover advantage in 10-min private-label food.
- Competitors (Swiggy Bolt, Blinkit Bistro) are restaurant-dependent.

CONCLUSION

Zepto Café is more than a product—it's a strategic edge. In a margin-tight Q-commerce market, it offers high profitability and strong user retention. For product teams, it enables rapid innovation; for investors, it enhances unit economics; for customers, it's a fast, high-value experience. The model relies on precise logistics, targeting dense urban zones for ultra-fast delivery. Initially limited, the menu now includes 100+ items. With 2–3 minutes for prep, most of the 10-minute window is reserved for delivery.

Resume

WHY I WANT TO GET INTO PRODUCT ANALYTICS

For me, building things has never just been about code or components—it's always been about impact. Whether I was designing railway safety systems during my time at Grasim or working on machine learning models for UAVs at Khageshvara Aviation, I was most energized when I could see how my work solved real problems. I've always been that person who wants to understand what truly matters to people, why they behave the way they do, and how we can build smarter, simpler experiences around that. That's exactly why product analytics excites me. It sits right at the intersection of curiosity and creation. I love the idea of digging into how people use a product, not just to crunch numbers but to uncover patterns, ask better questions, and make things better—bit by bit, experiment by experiment.

And Zepto, to me, feels like the kind of place where that mindset would thrive. It's fast, it's focused, and it's shaping how people experience convenience at scale. Joining a team that cares about moving quickly and meaningfully? That's the kind of energy I want to be around.

WHY THE ROLE OF PRODUCT ANALYST IS A FIT FOR ME

My background combines engineering, business analysis, and hands-on product work—from building automation systems and ML models to conducting market research and driving product direction at Khageshvara Aviation. I've worked cross-functionally, developed strong analytical skills, and gained a solid foundation in evaluating product performance through courses like Business Analysis and Derivatives. I'm proficient in Python and data visualization, and have built dashboards to track user behavior and optimize outcomes. More importantly, I bring a problem-solving mindset, focus on user experience, and a drive to learn. Zepto's culture of speed and ownership aligns perfectly with the impact-driven role I'm seeking as a Product Analyst.
